„BEAR“ FORCE AND RELIABILITY

SINGLE SHAFT SHREDDER

**AZR 600 -
AZR 2000 S**

Compact Single Shaft Shredders: of the AZR 600 - AZR 800 S series

- (1) The rotor shaft is made of solid steel. Adjustable cutting gap between rotor and counterknife (optional)
- (2) Hydraulic feed to ensure constant material feed to the rotor
- (3) Hydraulic cylinders suspended by cardanic joints prevent shortening of piston cup service life
- (4) Range of different screen mesh sizes for required chip size depending on material and task
- (5) Security package with gear end limit switch and reverse counter

with optional cooling

High-power shredders: the AZR 1000 - AZR 2000 S series

The following parameters are applicable to all machines of the AZR series:

Perforation size:

The standard size is 15/20 mm.

Optional sizes (mm):

10/12, 12/15, 20/25, 25/30, 35/40

Special sizes on request.

Throughput rate:

This parameter depends on the type of material being processed (long, short, wet, dry, etc.) as well as on the size of the screen perforation.

A machine usually processes between two and four hopper fillings per hour.

Removal of chips:

For this purpose you can use a suction plant, a conveyor screw or a conveyor belt. The minimum air speed for suction plants is 28 m/s.

Options:

- (1) = Movable screen cage
- (2) = 4-sided segmented floor, serrated plate and serrated rail
- (3) = Delivery by worm screw
- (4) = Turbo clutch from 30 kW

The circular knife system: Cutting knives that lower your operating costs!

The highly efficient scissors cut of the concave ground circular cutting heads provide a very high work rate with very little effort. The knife holders are welded or mounted on the rotor and the round knives can be turned up to **8 times** with just a few adjustments before having to be exchanged completely. The use of various types of knives enables job-related adjustment of the shredder to the material being processed.

*** New at Reinbold:** The outer broaching knife, are replaced by the circular knife V8. This promotes a uniform crushing of materials over the entire length of the rotor.

The functionality of the Single Shaft Shredders:

* The wood chips fall into the rotor faster by force of gravity

The different diameters of the rotors:

Different rotor diameters for different applications:
with 252 mm diameter for smaller applications
with 354 mm diameter for higher throughput
with 500 mm diameter for very high throughput

As larger the wrap angle of the rotor
the higher is the throughput.

Machines from the Reinbold product line:

AZR 600 K - 2000 S K Gigant Series: The single shaft shredder for effective plastics shredding

RLZ 400 - RHZ 1300 S Series: The horizontal shredder with horizontal material feed

Series RMZ 500 - RMZ 1000 S Series: The four-shaft shredder that is ideal for shredding long stock

RB 20 SV - RB 80 SV Series: The small but powerful briquetting press

Series RB 80 - RB 300 Flexible S Series: For briquetting chips and dust

RB 400 RS Series: For the industrial production of square briquettes

Drawing on its many years of experience, Reinbold, with its broad range of machines, is able to offer ideal solutions for different applications in material shredding and briquetting. Our testing facility is available to perform tests on your material.
